

Introducing CNA EcoCareSM Property Upgrade

www.cna.com

Helping protect the future of your business and our planet

At CNA, green practices have been a part of our day-to-day operations for many years. We recognize that being green is just as important to you and your business. That's why we're expanding our commitment to the environment by working with your independent agent to deliver the EcoCareSM Property Upgrade Extension Endorsement — a flexible new green coverage for your business.

In the event of a covered loss, this new endorsement enhances your existing building and personal property coverage by providing green upgrades to the damaged property. Green upgrades include structures, materials or processes that are environmentally responsible and resource efficient.

And the effort doesn't stop there — we are always working to develop additional products and services to meet your business needs.

When you're looking for coverages that can help protect your business and the world you live in ...
we can show you more.SM

Why select the CNA EcoCareSM Property Upgrade?

- We offer a broad definition of green rebuilding, giving you more flexibility.
- Limits are available by location — you choose the coverage that's most appropriate for your needs.
- If your building already has green features, CNA's standard property coverages allow for rebuilding with like kind and quality green features under our existing replacement cost coverage.
- LEED certification is not required, saving you time and money.

Examples of green upgrades:

- Energy efficiency — use of ENERGY STARTM appliances and products
- Materials efficiency — use of sustainable construction materials, materials management and recycling programs
- Water efficiency — use of water efficient processes and wastewater technologies
- Improved environmental quality — improved reductions in the quantity of indoor air contaminants and use of low-emitting products or materials

Automatic additional coverages:

- Vegetative roofs
- Recycling additional expenses
- Architect and engineering expenses
- Certification or recertification expenses
- Ventilation of reconstructed buildings
- Business income
