Risk Control

Safety Resources for Confined Spaces – General Industry

Lack of oxygen and a variety of gases make working in any confined space dangerous. Prevent employee injuries, eliminate hazards and take action toward creating more secure job sites with these safety and training programs from CNA. The links below provide resources on risk management strategies and Occupational Safety and Health Administration (OSHA) compliance updates.

Tool Box Talks
- Working in confined spaces:
  English and Spanish
- Plant Supervisors – Safety Responsibilities:
  English and Spanish

OSHA Confined Spaces Safety Resources
Manholes, crawl spaces and tanks are not designed for continuous occupancy and are difficult to exit in emergencies. Maintenance crews or subcontractors working in confined spaces face life-threatening hazards, including toxic substances, electrocutions, explosions and asphyxiation.

- Take action to prevent accidents:
  OSHA Standards, Compliance Materials and Case Studies
  OSHA Regulations Table of Contents
  OSHA Standards, Permit-Required Confined Spaces

SORCE® On Demand
Because confined spaces may be encountered in any occupation, workers need to be able to recognize confined spaces.

- Understand the risks:
  Confined Space New OSHA Rule eLesson
