

## Risk Control

# PrepWise Benchmark Review<sup>SM</sup>

CNA's PrepWise Benchmark Review<sup>SM</sup> is far more than a safety evaluation. It's a foundation for evaluating your risk management programs and benchmarking them against industry best practices and safety standards.

## Our Benchmark Methodology: 4 steps to elevate your risk management

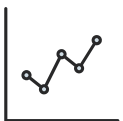

### Step 1: Risk Assessment

Following CNA's internal Risk Assessment, your team and your CNA Risk Control professional will identify the proper Benchmark Review for your company.

### Step 2: Collaborative Review

From there, you'll be led through a comprehensive analysis where key members of your team engage in a robust evaluation of your current state against industry best practices, then select the appropriate score that reflects the effectiveness of your controls.

### Step 3: Detailed Benchmark Scores

Going beyond an aggregate number, your benchmark score will provide detailed information from each section of the evaluation and offer insights into the strengths and areas for improvement in your current strategies.

### Step 4: Tailored Solutions

Following the review, a customized CNA service plan may be crafted to prioritize next steps and implement personalized solutions to support your company's current and future needs.
